SUMMARY

Software Engineer with 3+ years of experience building production-ready web applications across frontend and full-stack environments. Specializes in highly interactive React applications, integrating complex business logic, and delivering polished user experiences across e-commerce, gaming, and Web3 platforms.

SKILLS

- **Front-End Development**: React, Next.js, TypeScript, JavaScript, HTML5, CSS, SCSS, Tailwind CSS, Responsive Design, Web Performance Optimization, UI Animation, Framer Motion, React Native, Phaser
- **Back-End Development**: Node.js, Express.js
- **Databases & Data Access**: PostgreSQL, MongoDB, Prisma, Database Schema Design
- **APIS & Communication**: GraphQL, REST APIs, WebSockets
- **DevOps & Tools**: Git, Docker, JWT Authentication, AWS, CI/CD
- **Testing**: Test Automation, Jest, React Testing Library, Unit Testing, Integration Testing, End-to-End Testing
- **Web3 & Blockchain**: Blockchain Integration, Thirdweb, Ethers.js
- **State Management & Data Fetching**: Redux Toolkit, Server State Management, RTK Query, Apollo Client
- **Design & UI/UX**: Figma, Adobe Illustrator
- **Professional Skills**: Cross-Functional Collaboration, AI-Augmented Software Development, Debugging, Chrome Dev Tools, Mobile Development, Feature Prioritization, Product Development & Optimization

EXPERIENCE

Stealth Startup *CTO / Full Stack Engineer* *Remote* · **Sep 2025 - Present**

React • Next • TypeScript • Tailwind CSS • MongoDB • Node • Jest • React Testing Library • Docker • Feature Prioritization

- Led development of a configurable e-commerce platform with product customization, storefront management, and administrative tooling, transforming an early prototype into a production-ready B2B SaaS application.
- Streamlined administrative workflows by consolidating related configuration interfaces into a unified management experience, reducing navigation overhead and improving usability.
- Extended storefront configuration capabilities with enhanced customization and dynamic theme management, giving clients greater control over their storefront branding while reducing manual updates.
- Designed and implemented 64 automated tests spanning unit, integration, and end-to-end coverage across admin configuration, content management, and customer-facing ordering workflows, improving release readiness and protecting core product functionality from regressions.

Wolf Game: Caves (via Linc Web Tech LLC) *Software Engineer (Contract)* *Remote* · **Oct 2025 - Nov 2025**

React · TypeScript · Phaser · Redux Toolkit · RTK Query · Tailwind CSS · Node/Express · PostgreSQL · Prisma · Docker

- Built a configurable rewards management system with a dedicated admin dashboard that streamlined epoch management and enabled one-click reward distribution.
- Built polished, animation-driven UI systems for gameplay and reward experiences, combining responsive design, custom motion, sound integration, and synchronized UI state management to create a cohesive and engaging player experience.
- Identified and resolved gameplay state, inventory, and gameplay logic issues, improving gameplay reliability and player experience ahead of launch.

InfiniGods

React • Next • TypeScript • Redux Toolkit • SCSS • Framer Motion • MongoDB • Node • Thirdweb

Contractor *Remote* · **Feb 2024 - May 2024**

- Led the mobile Marketplace UI overhaul for InfiniGods's King of Destiny platform, translating high-fidelity Figma mocks into pixel-perfect responsive implementations that supported a successful product launch.
- Expanded backend-controlled feature toggles and assisted with production debugging and issue resolution, giving the team greater control over feature availability while improving production stability.

Software Engineer *Remote* · **May 2024 - Jan 2025**

- Architected the front-end codebase for InfiniGods' Valhalla Foundations platform by creating scalable, reusable patterns, SCSS systems, and API-ready data abstractions that improved development speed, streamlined backend integration, and ensured maintainable, responsive interfaces.
- Led UI/UX development across the platform, translating high-fidelity mocks into pixel-perfect, responsive interfaces with polished animations that delivered a premium Web3 experience on mobile, desktop, and ultra-wide displays.
- Engineered complex data visualizations and synchronized animation systems, combining custom charts, animated masking, dynamic number transitions, and viewport-aware sequencing to communicate tokenomics through engaging, responsive user experiences.
- Developed a large-scale, gamified staking interface spanning dashboards, leaderboards, vault management, onboarding, and transaction workflows, orchestrating complex React state and side effects to deliver a cohesive, highly interactive Web3 experience.
- Implemented blockchain transaction workflows with Thirdweb, including unified approval-and-staking flows, gas-efficient multi-vault staking, and live transaction feedback that simplified complex Web3 operations.
- Built polished, animation-driven interactions using coordinated motion, dynamic visual states, video transitions, synchronized audio, and responsive feedback, creating a premium gameplay experience around blockchain staking.
- Developed and maintained the UI for a live mission platform featuring seasonal campaigns, social media integrations, dynamic reward systems, leaderboards, and complex client-side state management, helping deliver a polished end-to-end seasonal reward experience.

Senior UI Developer *Remote* · **Jan 2025 - Apr 2025**

- Implemented the InfiniGods Webstore frontend with dynamic product rendering, filtering, purchase history, and backend-driven content management, enabling new store items to be launched without additional frontend development.
- Built dynamic, animation-driven purchase experiences for King of Destiny packs—including interactive reward modules, paginated pack-info popups, and product-controlled content visibility—which boosted user engagement and enabled packs to be added or removed with no frontend changes.
- Led King of Destiny Marketplace UI updates for the God Coin launch, adapting purchasing flows and digital content experiences to support a new in-platform currency, which enabled smooth adoption by users.
- Implemented responsive legal and informational pages for Valhalla Foundations from high-fidelity Figma mocks, accurately reproducing formatting and content, which improved readability and helped prepare the site for launch.

Pet Social LLC *Software Engineer* *Remote* · **Jan 2023 - Feb 2024**

React Native • GraphQL • Apollo Client • Node • Neo4j • WebSockets • Jest

- Improved application stability and performance for an iOS app through bug fixes, feature enhancements, and full-stack development.
- Developed responsive user interfaces and core social platform features, including instant messaging, comment replies, media uploads, notifications, follower systems, mentions, and animated page transitions.
- Built internal moderation and administrative tooling across web and mobile platforms, featuring user management with advanced filtering and Apollo Client caching, enabling a fast and efficient moderation system.
- Contributed to application stability and release quality through debugging, feature refinement, end-to-end testing, and Agile sprint development using Jira.

EDUCATION

University of Oregon

B.S., Computer Science

- **Coursework:** Studied object oriented programming, algorithms, data structures, software methodologies, operating systems, etc.
